What is the NARE Checklist?

As the lead coordinator in a refugee emergency, UNHCR has a responsibility to coordinate a multi-sectoral needs-based response. The NARE is principally designed to assist UNHCR operations with initial multi-sectoral assessments when there has been a significant sudden forced displacement of populations across borders. The NARE can also be used when there is a sudden influx of a population into an existing refugee operational environment or in an operation where inadequate assessments have been conducted.

NARE highlights information that is derived from pre-crisis and post-crisis secondary data analysis, before the primary data collection begins. For primary data collection, the NARE suggests data elements that can be derived from facility visits, observations, key informants and focus group discussions. It promotes the cross-analysis of information derived from multiple methodologies across multiple sectors to ensure a rapid, relatively complete picture.

How to Use the NARE Checklist

The NARE is a **highly customizable initial multi-sectoral needs assessment**. The Needs Assessment Team can decide which data collection methodologies should be used and which topics should be the focus. **This means that NARE users are not obligated to do the entire assessment specified here but can pick and choose from among the methods and themes depending on the time / resources available, the purpose of the assessment and the types of interventions that will be made.** Customize the data collection questions in the columns/rows you have selected according to your local situation. You can change or omit the questions suggested, or you may wish to add new questions entirely. Please also consider the contents of the “All Sectors” column and the callouts on population data management, security and logistics.

The following principles of the NARE should be taken into account in all situations:

a. a secondary data review should always be done in order to determine what information already exists;
b. initial needs assessments should be multi-sectoral and coordinated across sectors (detailed sector-specific needs assessments can follow the initial multi-sectoral assessment); and
c. different types of information are best gathered using different types of data collection methodologies.

A multi-functional team should lead the NARE and collectively prioritize data elements on the checklist based on their operational relevance and how obtainable the information is. A secondary data review should be conducted first to identify information gaps. High priority data elements that cannot be obtained from secondary data should be added to data collection forms. One data collection form should be used for each of the data collection methodologies selected from the checklist. Mixed data collection methodologies should not appear on the same data collection form.

Data collectors should then be trained on the use of the forms. Focus discussion leaders should be trained on focus group discussion facilitation.

After the data is collected, cleaned and compiled, the multi-functional team should analyze and collectively agree on the interpretation of the findings. Reports on the findings should be rapidly disseminated to concerned stakeholders.

This initial assessment is intended to be a one-off activity and not an ongoing monitoring system.

Notes

a. The term “refugees” is used throughout the tool, but this may include asylum seekers, stateless persons or other persons of concern.
b. The data will need to be disaggregated by camps / collective centres if they are present.
c. **This assessment is intended for use by generalists; however, some of the secondary data sources may need to have sector-specific expertise. This emergency assessment does not replace in-depth sectoral assessments.**
d. The NARE Checklist is principally designed to assist UNHCR operations with initial multi-sectoral assessments when there has been a significant sudden forced displacement of populations across borders. The NARE could also be partially utilized when there is a sudden influx of a population into an existing refugee operational environment or in an operation where inadequate assessments have been conducted.
### NARE Cross Cutting Protection Issues

#### Critical Background (pre-influx) information collection and analysis
- What historical political / social dynamics existed within and between groups in the refugee population, including marginalized and excluded groups?
- What is the legal framework and practice in the country of asylum with respect to refugee protection?
- What community based protection mechanisms exist e.g. coping mechanisms, community watch groups, community leaders, women's groups, etc.?
- What is the school enrollment rate prior to displacement in the country of origin (disaggregated by age, sex, and, if possible, grade)!
- Is SGBV a documented problem in the country of origin and/or country of asylum? If so, which forms?

#### Secondary Data Collection
- Post-influx secondary data review
  - This information can come from other sectors and/or organizations. It must be done prior to primary data collection. Information not available in the secondary data analysis should be acquired through primary data collection.
  - Who are the main local, national and international protection actors with capacity to respond? If they don’t have the capacity, what are the areas where they would require more capacity building?
  - What, if any, national protection coordination mechanisms currently exist?
  - What, if any, security concerns exist in present refugee hosting locations? (e.g. landmines, presence of combatants, risk of cross border incursion, tensions between refugees and host community, etc.)
  - Are there any reports of refoulement, including preventing access to territory or harassment from authorities?
  - Are there any restrictions affecting refugees’ land-rights and land access? (e.g. collecting fuel-wood, timber, fodder, grazing their animals, engaging in agricultural or subsistence activities) If yes, what are they?

#### Community Observation
- These questions are intended for direct observation and are not based on interviewing. The results from observation can be cross-analyzed with information from other sources for verification purposes.
  - Is there a military installation in close proximity to refugee hosting areas?
  - Are there signs of combatants among the refugee population (e.g. visible presence of weapons, individuals in uniform and/or disproportionately large numbers of fighting-age men)?
  - Are reception arrangements visibly adequate for new arrivals (e.g. not overcrowded, availability of water and food, separate toilet facilities etc.)?
  - Are significant numbers of women or female-headed households arriving and/or living alone?
  - Is there a disproportionately large presence of children? Are there boys and girls arriving / living without adult caregivers?
  - What are the main physical hazards for children (e.g. landmines, uncovered wells, unsafe buildings, distance to school, etc.)?
  - Are there physical spaces available for establishing key community infrastructure (e.g. child friendly spaces, schools, community centres)?
  - Are there any signs or recent deaths or mourning (e.g. religious ceremonies, mourning traditions, new graves)?
  - Are there any signs of limitation to freedom of movement for the population (e.g. roadblocks, checkpoints, fences)?
  - Are there any population groups not seen in public places (e.g. any age or gender demographic, persons with disability, ethnic or religious minorities)?
  - Are there specific signs of neglect or isolation of some persons or groups? (please specify)

#### Community Key Informants
- Community representatives can be consulted to ask questions about the entire community. Key informant interviews may help validate or explain conclusions from observation. To ensure adequate selection process for key informant interviews please refer to ACAPS Technical Brief “Key Informant Direct Observation Pocket Version”
  - What community based protection mechanisms exist e.g. coping mechanisms, community watch groups, community support groups, leadership structures, etc.?
  - Have there been instances of violence or abuse, including SGBV? If yes, which kind, when, where, targeting whom?
  - What, if any, has been the community’s response to these instances of violence /abuse? If none, why not?
  - Do victims of crime, including SGBV survivors, have access to judicial recourse? (police post and courts)
  - Are there boys and girls arriving / living without adult caregivers?
  - What urgent information do members of this community (AGD) need to know to protect themselves?
  - Are there any particular groups that face specific risks? Why and what are these risks? What can be done to mitigate these risks?
  - Are there any – or reports thereof – of combatants, ex-combatants or their families in the group /at the site?
  - Are children being recruited by armed actors, or reports thereof?
  - Is the population of refugees at this site growing, shrinking or staying the same? Why?
  - Are families forced to use unsafe practices to meet their basic needs (e.g. survival sex, early marriage, child labour, etc.)?
  - What is the estimated percentage of children with access to schools and other learning opportunities?
  - Do schools have SGBV and child protection reporting mechanisms?
  - Are schools and other learning environments considered safe by the community? Do they implement safe learning activities?

#### Review – Actions required
- These are possible actions that may be informed by the secondary data analysis.
  - Mitigate immediate security risks to specific groups at risk and wider population
  - Establish effective individual registration and documentation systems, including referral pathways for identified protection cases (e.g. child protection, SGBV, specific needs, etc.)
  - Work with communities to strengthen or to foster the creation of community-based protection mechanisms
  - Mainstream protection into technical areas, including ensuring distribution and aid mechanisms are appropriate, accessible and non-discriminatory based on an age, gender and diversity (AGD) approach
  - Establish a two-way mass communication mechanism with refugees and host communities in order to inform them of the availability of services and other key protection information

### Primary Data Collection

#### Focus Group Discussions
Focus group participants are divided by age, gender and diversity criteria, but additional group divisions may be based on the hierarchical division of the group (e.g., economic strata, displacement status, ethnicity, etc.).

Note: Individual cases and names should not be mentioned in the course of the discussion.

Questions listed here are examples only and need to be contextualized prior to use.

- What are the reasons that made communities flee to this location?
- Are people leaving this location? If yes, why?
- What are the most important dangers and difficulties that this community is experiencing? Who is most affected by these problems or dangers? Where are these most likely to occur? What are the community’s capacities and suggestions to address those?
- What obstacles or problems does the community experience to obtain humanitarian assistance or important services, such as education and health? What age, gender and diversity groups are more affected by these obstacles or barriers?
- Do you know of services available to help survivors of violence and abuse (e.g., medical, psychosocial, material, legal, community-based)? Are these services adequate and appropriate (e.g., enough medicine, presence of female staff, staff speaking same language)?
- How does the community handle/resolve cases of violence and abuse - do they go to the police? to the court? to the religious leaders? or to others? Is the response received adequate and appropriate?
- How is the community organized?
- What community-based protection mechanisms exist e.g., coping mechanisms, community watch groups, community support groups, leadership structures, etc.?

#### Household Key Informant
These questions are appropriate to ask during household interviews. These questions pertain to the situation of a particular household.

- Where did you come from? What route did you take here?
- Has your family been registered since your arrival here? If yes, by whom?
- What are your family’s top three priority needs?
- What were your family’s reasons for flight?
- What type(s) of transportation did your family use to travel here?
- Are any family members not present? Where are they? Why are they not here?
- Do any of your family members have specific needs?
- Are you caring for any children that are not your biological children?
- Does your family feel safe here? If not, why not? Do you know where you can go to get help if you don’t feel safe? What would make your family feel safe?
- Has your family received any assistance? Were any problems encountered when your family received assistance? How does your family compliment your assistance?
- What is your family’s experience in interacting with the host community?
- Were your children enrolled in school prior to displacement? Are they enrolled in school now? If not, why not?
- Does your family have identity documentation from your country of origin? If yes, what type of documentation? If no, why not?
- Are family members scared or in psychological distress?

#### Infrastructure / Facilities Visits
Visiting these facilities for observations or key informant interviews may assist the assessment.

- Police posts
- Legal Clinics
- Camp perimeter walk
- Bathing facilities
- Latrines
- Places of Detention
- Markets
- Individual shelters
- Local administrative offices or traditional leaders
- Schools (formal or informal; host and refugee schools)
- Health facilities
- Areas where household fuel is collected
- Distribution points
-Childcare facilities
- Places of worship
- Community Centres

---

**NARE Cross Cutting Protection Issues**
## Secondary Data

### Critical Background (pre-influx) information collection and analysis

- Existing contingency plans
- Lessons learned from previous emergencies in this country of asylum or with refugees from this country of origin
- Livelihood groups and patterns as they relate to skills, wealth, urban/rural dynamics, language barriers, ties with potential host population and rights in country of asylum
- Potential service providers (government, NGOs, community groups, and commercial/private)
- Potential for integration into existing services and national or community-based programmes
- Identification of multisectoral partners including host community interlocutors, NGOs and civil society leadership
- Census information
- Maps of existing infrastructure

### Post-influx secondary data review

This information can come from other sectors and/or organizations. It must be done prior to primary data collection. Information not available in the secondary data analysis should be acquired through primary data collection.

- Any prior initial assessments concerning current influx (if available)
- Cross-sectoral intervention analysis (what are others doing and what are the activity/resource gaps, including the government/military)
- Access to markets and land
- Emergency market surveys (availability and prices of construction materials, household items and food since the emergency)
- Common Multi-Sectoral Secondary Data Sources include:
  - Border monitoring
  - Intention surveys
  - “Who Does What Where” information
  - Needs assessments from the country of origin
  - Government statistical office reports
  - Government emergency response reports

### Review – Actions required

These are possible actions that may be informed by the secondary data analysis.

- Share findings of secondary data review with other stakeholders
- Coordination of needs assessment data analysis findings with other sectors
- Identify information gaps
- Develop an initial strategy of intervention
- Establish primary data collection systems for minimum emergency indicators (e.g. PPHIV basic indicator report)
- Establish population data collection systems (e.g. rapid population estimation, emergency registration, etc.)
- Explore opportunities for income generation, including for women at risk.

### Community Observation

These questions are intended for direct observation and are not based on interviewing. The results from observation can be cross-analyzed with information from other sources for verification purposes.

- What are the community’s power relations? Is any group getting/commandeering more assistance than others?
- How are tasks distributed among community members?
- What are the community’s coping mechanisms? Are any of these coping mechanisms dangerous or unsustainable?
- What are potential livelihood opportunities?

### Community Key Informants

Community representatives can be consulted to ask questions about the entire community. Key informant interviews may help validate or explain conclusions from observation. To ensure adequate selection process for key informant interviews please refer to ACAPS Technical Brief “Key Informant Direct Observation Pocket Version”

- How do community members find out information about the emergency?
- How are decisions made here that affect the whole community?
- Is this a location where new refugees are arriving, where refugees are leaving or both? If refugees have left, where are they going to? Why are they leaving?
- Has this community received any humanitarian assistance yet? If yes, what kind of assistance? If yes, are there unassisted refugees here too?

### Focus Group Discussions

Focus group participants are divided by age, gender and diversity criteria, but additional group divisions may be based on the hierarchical division of the group (e.g. economic strata, displacement status, ethnicity, etc.). Note: Individual cases and names should not be mentioned in the course of the discussion.

- Questions listed here are examples only and need to be contextualized prior to use.
- What is the impact of the sudden influx on the host population? In what ways can the host community assist refugees?
- How do members in your community find out information about the emergency response?
- What are the community’s highest priority problems?
- How are people coping with the problems currently?

### Household Key Informant

These questions are appropriate to ask during household interviews. These questions pertain to the situation of a particular household.

- Who in the household collects water and/or firewood? Where?

### Infrastructure / Facilities Visits

Visiting these facilities for observations or key informant interviews may assist the assessment.

- Local government offices
- Community centres

**Please see infrastructure and facilities mentioned in other sectoral areas**
### Primary Data Collection

**Critical Background (pre-influx) information collection and analysis**
- Rainfall patterns
- Hydrological and Geological map
- Identify safe infrastructure availability
- Potential water providers and water sources
- Availability of WASH stockpiling equipment

**Post-influx secondary data review**
- Assessment of available water sources
- Hygiene practices of community
- Identify male and female community members who can be mobilised to participate in locating and designing safe water and sanitation locations and policies
- Mapping of safe locations for boreholes, water points etc...
- Identify potential site risks (e.g. areas exposed to flooding)

**Review – Actions required**
- Emergency (new/rehabilitated) drinking water supplies measures are urgently required if less than 15 lts/pers/day is available (particularly if environmental risk factors such as dense population, contaminated water supply, poor hygiene are high).
- Emergency “shock” treatment of the drinking water supply is required if the existing system is still functional, but has likely been contaminated (as a result of physical damage to its infrastructure, interrupted/intermittent service provision, etc.).
- HH water treatment is recommended if the quality of drinking water is poor and most HH understand or can be quickly taught how to use home water treatment effectively.
- The need for adequate HH water transport and storage facilities should be assessed in all cases.
- Emergency sanitation (particularly excreta disposal) and hygiene promotion measures are required immediately if people are settled in high density areas and exposed to poor sanitary conditions and/or probable diarrhoeal outbreaks.
- Emergency distribution of WASH NFI is required when acute shortage has been objectively observed.

### Secondary Data

**Post-influx secondary data review**
- This information can come from other sectors and/or organizations. It must be done prior to primary data collection. Information not available in the secondary data analysis should be acquired through primary data collection.

**Community Observation**
- Environmental health conditions - look for signs of: a) unsafe hygiene practices (open defection, medical waste disposal, etc.); b) contamination due to weak or absence of sanitation infrastructure including for excreta, waste water, solid waste, drainage and medical waste disposal; and c) disease transmitting vectors (rodsents, mosquitoes, etc.).
- Existing WASH services - look for evidences of: a) collapsed or poorly performing services; b) strain on capacity of services (lines, conflicts, etc.) c) access difficulties (distance, security, etc.) and d) vulnerability of services (potential contamination sources, natural hazards, etc.) e) queuing time at facilities.
- Are refugee women and girls, men and boys seen queuing at unsafe hours for water?
- Are there sex segregated latrines in schools?
- How many gender segregated latrines are there at each existing or potential site for formal and non-formal education purposes in the displacement or host community area?
- Is there access to hand washing and potable water at existing or potential sites?
- Are the needs of children considered in the design WASH programmes (e.g. safe access to latrines around home, schools, CFS, also the size of water containers and safe access to source, distance etc)
- Are there sex segregated latrines in schools?
- Is there access to handwashing and potable water in schools?

### Community Key Informants

**Community representatives can be consulted to ask questions about the entire community. Key informant interviews may help validate or explain conclusions from observation. To ensure adequate selection process for key informant interviews please refer to ACAPS Technical Brief "Key Informant Direct Observation Pocket Version"**
- What are the water sources available at local level
- Is there disruption on the current water supply?
- What is the quantity of water available (m3/day) through the water system? Is it safe for drinking? If not, why?
- Are human and animal excreta properly contained and disposed of? How many and what kind of excreta disposal systems (s) facilities are there? Are these functional and accessible to all? If people feel safe to access to it?
- What are the critical issues for the building of WASH infrastructure (high water table, soil type and absorption capacity, available space, flood prone areas, social factors/habits, land issues, local materials, gender, etc...)

### Focus Group Discussions

**Focus group participants are divided by age, gender and diversity criteria, but additional group divisions may based on the hierarchical division of the group (e.g. economic strata, displacement status, ethnicity, etc.). Note: Individual cases and names should not be mentioned in the course of the discussion.**
- Questions listed here are examples only and need to be contextualized prior to use.
- Are you satisfied with the water services provided? Are you satisfied with the sanitation services provided?
- Which locations would you consider as safe (for privacy and safety) to locate communal latrines and bathing facilities within the camp/settlement? Which locations would you consider as safe to locate water collection points?
- Would you prefer separate latrines and bathing facilities for male and female? Why? What about facilities separated per families?
- What would be the best strategy to maintain and clean these facilities? Who should be in charge for it? Why?
- I would like to get your suggestions/ideas on this design (show the design or prototype): what do you think about it? would you do it differently? what would you change to make it more suitable to your needs? What would you add? why?
- How do you normally handle menstrual hygiene? What do you normally use (sanitary disposable pads or re-usable pads)?
- What is the best method to dispose it off considering that the disposal into the pit latrines might drastically influence the filling rate?
- What is your main concern in practicing the clean up of your compound? How can we improve to make it regular?

### Household Key Informant

**These questions are appropriate to ask during household interviews. These questions pertain to the situation of a particular household.**
- What is the main source of drinking water for members of your household?
- Yesterday, how much water did your household collect? Please show me the containers you used yesterday for collecting water (from sunrise to sunset), and how many times for each?
- Please show me where you store your drinking water.
- What kind of toilet facility does this household use?
- How many households share this toilet?
- Do you have soap for handwashing? Can you show me (presented within 1 min)?
- When do you think are the important times to wash your hands?

### Infrastructure / Facilities Visits

**Visiting these facilities for observations or key informant interviews may assist the assessment.**
- Water systems
- Water treatment plants
- Solid waste management
- Community places (schools, health centres, markets)
- Sanitation infrastructure (showers, latrines, washing blocks, communal kitchens)
### Primary Data Collection

#### Critical Background (pre-influx) information collection and analysis
- Government policy regarding encampment of refugees; alternatives available to new arrivals
- Existing displacement sites; [name, location, current population, availability to accommodate new arrivals, access and protection concerns].
- New potential sites allocated by the government/local authorities; [name, location, distance from border and major towns/logistics centers, access and protection concerns].
- Capacity of the existing/new sites for new influxes
- Government focal points for management and administration of camps
- Identification of NGOs or other partners with potential camp management capacity
- Anticipated cultural living practices, particularly with regards to community power dynamics and communal living arrangements

#### Secondary Data

- Number and characteristics of displacement sites; [name, location, capacity, distance from border and major towns/logistics centers, access and protection concerns]. Distinguish between urban and rural sites.
- Movement patterns in and out of displacement sites
- Total estimated number of displaced people living in each displacement site
- Number and percentage of refugee population that have been registered (household and/or individual level)
- Identify host family / host community practices
- Refugee assets, including livestock. Capacity to accommodate assets/livestock at sites.
- Availability of additional sites for camps, settlements or collective centres
- Document "who is doing what where" in camps, collective centres and other communal living arrangements
- Basic indicator values (protection, WASH, health, food, nutrition, education)

#### Post-influx secondary data review

- Develop camp management and coordination strategies (management, reception centre requirements, closure, environmental)
- Set up inter-sectoral camp management / coordination body (with relevant actors including government authorities)
- Set up monitoring system for service and assistance delivery and coordination
- Facilitate different sectors to ensure site management and planning includes community engagement structures, and mitigates specific risks including SGBV, unaccompanied minors,
- Explore and analyze relationships and interactions between people living inside and outside of sites (both refugee and host communities)
- Reflect protection considerations in camp management and design, including AGD perspective through participatory engagement with different groups of persons of concern including women
- Mitigate top physical dangers to boys and girls in the camp/community (e.g. hazards likely to cause injury/death)

### Community Observation

- Can refugees move freely within and outside of the site?
- Is the site fenced or otherwise secured?
- How are services and accommodation arranged within the site?
- Are there areas at particular risk for security or other hazards?
- How are the populations arranged in the camp?
- Is there an address system in the camp?
- Are law enforcement agents present in the site?
- Are there camp management staff regularly present?
- Which service providers are regularly present in the site?
- What are the locations of distribution points within the camp?
- What are the locations of general infrastructure in the camp? What is the infrastructure being used for? What is its condition?
- Do the refugees have specific assets (livestock, vehicles, etc.)?
- Are there communal or individual facilities for the following: accommodation, kitchens, latrines, showers/ bathing areas?

### Community Key Informants

- What are your community’s main challenges to greater self-reliance within the site?
- Are there any obstacles to community participation in self-governance? If yes, what are they?
- What are natural or manmade risks to the camp population?
- Are there groups at particular risk within the site?
- What restrictions do you face on movements in and out of this displacement site?
- Is there a threat of forced eviction from this site?
- Has a CRI distribution in your displacement site taken place in the last month?
- Has a food distribution in your displacement site taken place in the last month?

### Focus Group Discussions

- Do you perceive any service or infrastructure gaps within site? If so, what are they? Are some gaps more important than others? If so, which ones and why?
- Do members of the community have access to law enforcement mechanisms? If not, why?
- What community based organisations exist within this site e.g. community watch groups, community support groups, leadership structures, etc.
- Are vulnerable people in your location able to access services? If not, which groups, which services and why not?
- Do you feel well informed about what is happening in the site?
- Do you feel well informed about what is happening in the site?
- Do you feel you can participate in camp management activities?
- Do you know where to get information about what is happening in regard to services, assistance and protection?
- Do you know who or where to raise concerns/complaints, including protection problems?

### Household Key Informant

- What is your family’s experience in interacting with other site residents?
- Have you encountered any problems with camp management or law enforcement providers within the site?

### Infrastructure / Facilities Visits

- Site management facilities/offices
- Police posts
- Camp perimeter walk
- Distribution areas
- Markets
- Health services
- Waste treatment and disposal
- WASH facilities
- Community Centers

#### Review – Actions required

- These are possible actions that may be informed by the secondary data analysis.
- Develop camp management and coordination strategies (management, reception centre requirements, closure, environmental)
- Set up inter-sectoral camp management / coordination body (with relevant actors including government authorities)
- Set up monitoring system for service and assistance delivery and coordination
- Facilitate different sectors to ensure site management and planning includes community engagement structures, and mitigates specific risks including SGBV, unaccompanied minors,
- Explore and analyze relationships and interactions between people living inside and outside of sites (both refugee and host communities)
- Reflect protection considerations in camp management and design, including AGD perspective through participatory engagement with different groups of persons of concern including women
- Mitigate top physical dangers to boys and girls in the camp/community (e.g. hazards likely to cause injury/death)
## Settlement Development, Shelter and CRIs - NARE Checklist

### Critical Background (pre-influx) information collection and analysis
- Climate and cultural practice information that impacts settlement planning, shelter and CRI selection
- Building practices of refugees in country of origin (e.g. building types, sizes, construction materials, physical architecture, etc.)
- Review of previous market surveys (availability and prices of construction materials and household items before the emergency)
- Housing, land and property ownership trends and laws in the country of asylum (e.g. renting, leasing, ownership, compulsory acquisition)
- Which national government departments are responsible for shelter, settlement planning and public infrastructure facilities?
- What are the national building standards?
- Has the government allocated potential sites to host refugees? If yes, is geological information available for the sites?

### Secondary Data

#### Post-influx secondary data review
- Existing infrastructure and services surrounding the area where the refugees are located which will influence settlement development and planning
- Identify the traditional shelter types of both displaced population and host community (avoid disparity between refugee and host community living conditions)
- Availability of shelter materials (e.g. natural resources, nearby stockpiles, regional suppliers, etc.)
- Identification of persons with specific needs requiring shelter (re)construction assistance or specific shelter (disability and access)
- Options to ensure safety of shelter (e.g. types of materials, "fences" around family plots, availability of locks)
- Availability of land and facilities for camps / settlements / collective centres

#### Review – Actions required
- Multisectoral and participatory settlement planning (infrastructure required, agencies involved, Refugees involved including women and other specific groups)
- Provision of safe Emergency Shelter and CRIs in coordination with protection to ensure appropriate and protective shelter for women and children and people with special needs.
- Address land issues with government
- Identify long term or transitional shelter solutions if required (likely)
- Provision of shelter and CRI assistance to host families
- Design reconstruction and repair methodologies for shelter in places of origin (if applicable)
- Ensure minimum space of covered shelter area (3.5 m² per person) is respected
- Adapt shelter to protect refugees from extreme weather conditions (provision of shade nets or winterization kits)
- Provide cooking space and access to basic services
- Provide training to refugees to enable construction of shelter

### Community Observation

These questions are intended for direct observation and are not based on interviewing. The results from observation can be cross-analyzed with information from other sources for verification purposes.

- What is the existing infrastructure surrounding the displacement location?
- Are there any environmental risks/hazards related to displacement location which should be addressed in settlement development? (e.g. flooding, landslide, high winds, sandstorms etc.)
- What is the average number of persons per shelter?
- What is the average shelter size?
- How does the shelter respond to excessive rainfall? How does the shelter collect rain water?
- Observing from the shelter’s interior, what is the shelter’s quality of space? (Availability of light, quality of materials, temperature, ventilation, etc.)
- Are there improvised (self-constructed) shelters at the site? If yes, what estimated proportion of shelter are improvised?
- What types and quantities of household belongings are refugees arriving with?
- If the site has received distributed relief items, how are they being used?

### Community Key Informants

Community representatives can be consulted to ask questions about the entire community. Key informant interviews may help validate or explain conclusions from observation. To ensure adequate selection process for key informant interviews please refer to ACAPS Technical Brief "Key Informant Direct Observation Pilot Version"

- Which local government departments are responsible for shelter, settlement planning and public infrastructure facilities?
- What are the top priority problems or concerns with shelter at this settlement?
- What local practices exist for shelter construction?
- Have shelter materials been distributed by humanitarians at this site? If yes, what was distributed and when was the distribution?
- Have CRIs been distributed by humanitarians at this site? If yes, what was distributed and when was the distribution?
- Is the land where refugees are located used for any activity by the host community?
- What are the shelter construction capacity and skills of the refugees and host community?
- What are the local environmental concerns regarding the local sourcing of construction materials?
- Which household and livelihood support activities typically take place in or adjacent to the refugee and host shelters? Does the current settlement layout and shelter design support these activities?

### Focus Group Discussions

Focus group participants are divided by age, gender and diversity criteria, but additional group divisions may be based on the hierarchical division of the group (e.g. economic strata, displacement status, ethnicity, etc.). Note: Individual cases and names should not be mentioned in the course of the discussion.

Questions listed here are examples only and need to be contextualized prior to use.

- Are you satisfied with the emergency shelter provided? If not, why?
- Are you satisfied with the layout of the settlement? If not, why and how do you suggest it be improved?
- Are there any infrastructure gaps in the settlement? (e.g. lighting)
- I would like to get your suggestions/ideas on this design (show the shelter design or prototype): What do you think about it? Would you do it differently? What would you change to make it more suitable to your needs? What would you add? Why? (e.g. partition to separate sleeping and living area)
- Which waste collection and disposal systems are currently being applied? Do you have any concerns and how can we improve it?
- Do you feel safe in your shelter? Do you feel safe using the communal facilities?
- What types and quantities of household belongings are refugees arriving with?

### Household Key Informant

These questions are appropriate to ask during household interviews. These questions pertain to the situation of a particular household.

- How many people live in this shelter?
- How many families live together in this shelter? (note - need definition of family for this question)
- Do you cook inside or outside?
- Do you feel protected by your shelter (physical and emotional protection from the weather, from theft, threats of violence and SGBV)?
- If not, why?
- Did you construct your shelter yourself? Did you receive any assistance (material, labour force) in constructing your shelter? Have you modified your shelter? If so, how? Have you built an additional shelter on your plot? If so, for what purpose do you use it?
- Which CRIs have you received? How do you use them? Have you sold any? If so, why?
- Do you pay rent? If yes, how much?
### Secondary Data

- Results of any rapid health and nutritional screenings
- Assessment of infant and young child feeding practices (IYCF)
- Amount of food and utensils refugees are arriving with
- Food and nutrition assistance already distributed and planned to be distributed
- How much food and nutrition assistance is likely to be required (on arrival, in transit and in camp/settlement)
- Availability and price of food and related items (e.g. fuel, stoves) in local markets
- Availability of and safety of access to domestic energy resources including cooking fuel near displacement sites
- Rights to employment in hosting country

### Review – Actions required

- Nutritional screening
- Treatment of Moderate Acute Malnutrition and Severe Acute Malnutrition
- Consider implementing blanket feeding, if required
- General food assistance (vouchers, cash, direct provision)
- Monitoring of distributions and usage (Food basket monitoring, Post distribution monitoring)
- Rapid Joint Assessment Missions (JAM) with WFP
- School Feeding

### Community Observation

- What assets are generally available for food, cooking and livelihoods in the community (cooking equipment, food, livestock, personal valuables etc.)?
- What do women appear to be feeding children under 2 years old?
- What are the typical foods the population appears to be eating?
- What are foods available on markets? What are the stock levels of each type of food?
- Who is buying and who is selling food? (e.g. refugees or hosts? professional traders? small traders?)
- Is cooking fuel available to refugees?
- Are domestic energy needs being met through existing program or are refugees leaving camp/settlement in search of cooking fuels?
- How do refugees appear to be using food aid? (e.g. milling, selling)
- Do women and girls appear to collect food and CRI distributions? Do women and girls participate in the distribution and monitoring?

### Community Key Informants

- What changes in diet have occurred since the onset of the emergency? (e.g. number of meals, quantity and diversity of food consumed)
- What changes in diet have occurred since the onset of the emergency for children under 5 years old? (e.g. number of meals, quantity and diversity of food consumed)
- How have food prices changed in local markets since the onset of the emergency?
- How have prices for commodities other than food changed in local markets since the onset of the emergency?
- What are the main sources of food for this community? (e.g. agriculture, livestock, trading, humanitarian aid, etc.) Are these food sources sustainable?
- Does the community have access to agricultural land?
- If the community has livestock, where is it kept?
- What are the staple foods (main foods) the refugees are consuming now?

### Focus Group Discussions

- What coping mechanisms are you using to get enough to eat?
- What are the main sources of income in this community?
- What are the main sources of food in this community?
- What do you spend your money on the most?
- What foods are given to infants and young children under 2 years old?
- Is bottle feeding practiced widely among infants under 1 year old?
- What typically happens at food distribution events? Is any group not able to go to food distribution events?

### Household Key Informant

- How long will your family’s current food stocks last?
- How long will your family’s current fuel stocks last?
- How many meals a day did you typically have before the emergency?
- How many meals did you eat yesterday?
- How has the variety of food you eat changed since the emergency?
- Is the food distributed appropriate? (quality, type, etc.)
- Have you sold any of your assets to buy food?
- Have you sold any of your food rations? If yes, what did you buy with the money?
- Do you feel safe at distribution events?
- Do you share your food rations with other families that do not have a ration card?

### Infrastructure / Facilities Visits

- Markets
- Cooking sites
- Hot meal facilities
- Food distribution and storage sites
- Nutrition Centres
- Milling facilities

---

## Secondary Data

**Critical Background (pre-influx) information collection and analysis**

This information provides information on context and pre-existing coping mechanisms and vulnerabilities.

- Which education development actors are active and which education programming areas are they working on?
- Is there a regional agreement in place that ensures that country of origin teaching qualifications are recognised by the country of asylum?
- Is the Ministry of Education willing to accept refugees in local government schools?
- Where are existing schools and what is their capacity?
- Do education actors (e.g. Education Working Group) have an emergency contingency plan that can be engaged in a refugee influx?
- Is there an in-country emergency stockpile of school supplies that can be used for a refugee influx? If yes, how many students does it cover?
- Are there any groups of children who are excluded from school enrolment in the country of origin (e.g. girls, nomad populations, minorities, etc.)?

**Post-influx secondary data review**

This information can come from other sectors and/or organizations. It must be done prior to primary data collection. Information not available in the secondary data analysis should be acquired through primary data collection.

- How many school aged children (disaggregated by sex) have arrived?
- How many teachers are needed in order to allow for a teacher:student ratio of 1:40?
- How many qualified teachers are among the refugee population?
- Is the Ministry of Education willing to accept refugee new arrivals in local government schools? Do they have the capacity to absorb refugee children into existing schools?
- What is the gap between the school supply needs of the newly arrived refugees and the prepositioned stock?
- Are school activities being disrupted by refugees occupying schools for emergency shelter?
- Is there a need for language support / instruction to refugees?

**Review – Actions required**

These are possible actions that may be informed by the secondary data analysis.

- Rapid Joint Assessment Missions (JAM) with WFP
- School Feeding MoU with WFP activated
- Set up temporary learning spaces
- Recruitment / training of teachers
- Advocacy/community messaging on value of education
- Establish viable partners across sectors
- In consultation with protection and shelter, encourage relocation of families sheltered in schools if possible

## Post-influx primary data collection

### Community Observation

These questions are intended for direct observation and are not based on interviewing. The results from observation can be cross-analyzed with information from other sources for verification purposes.

- Are there many children visibly not in school during school hours (e.g. in the streets, in the markets, at home, working, etc.)? If yes, what are they doing and what are the general characteristics of the children (e.g. girls, boys, minorities)?
- Do school facilities appear safe? If no, why not?
- Does the school show signs of being open / operational?
- Are there many children visibly not in school during school hours (e.g. in the streets, in the markets, at home, working, etc.)? If yes, what are they doing and what are the general characteristics of the children (e.g. girls, boys, minorities)?
- Is there a need for language support / instruction to refugees?

### Community Key Informants

Community representatives can be consulted to ask questions about the entire community. Key informant interviews may help validate or explain conclusions from observation. To ensure adequate selection process for key informant interviews please refer to ACAPS Technical Brief "Key Informant Direct Observation Pocket Version".

- What are the underlying causes and barriers to access for out of school children?
- What is the capacity and willingness of host community to integrate refugees?
- What is the capacity and willingness of national education structure to absorb refugees?
- What kind of support can the refugee community provide? (e.g. repairing damaged schools/facilities, assuring of safety of children & teachers, etc.)
- What kind of support can the host community provide? (e.g. provide school facilities, assuring of safety of children & teachers, etc.)

### Focus Group Discussions

Focus group participants are divided by age, gender and diversity criteria, but additional group divisions may be based on the hierarchical division of the group (e.g. economic strata, displacement status, ethnicity, etc.).

Note: Individual cases and names should not be mentioned in the course of the discussion. Questions listed here are examples only and need to be contextualized prior to use.

- Are there groups of children who don’t attend school? If yes, what are the characteristics of those groups? Why are they not attending school?
- What could be done to improve access to school for these children?
- What support to education is most essential right now in this community?
- What kind of support can the refugee community provide? (e.g. repairing damaged schools/facilities, assuring of safety of children & teachers, finding teachers, etc.)
- What kind of support can the host community provide? (e.g. provide school facilities, assuring of safety of children & teachers, etc.)

### Household Key Informant

These questions are appropriate to ask during household interviews. These questions pertain to the situation of a particular household.

- Were your children enroled in school prior to displacement? If not, why not?
- Are all of your children enrolled in school? If not, why not?

### Infrastructure / Facilities Visits

Visiting these facilities for observations or key informant interviews may assist the assessment.

- Schools (host community & camp) & WASH facilities etc
- Possible storage facilities / storerooms (for food; teaching & learning resources)
- Possible sites to operate as temporary learning spaces

## Education - NARE Checklist

- **Possible sites to operate as temporary learning spaces**
- **Possible storage facilities / storerooms (for food; teaching & learning resources)**
- **Rapid Joint Assessment Missions (JAM) with WFP**
- **School Feeding MoU with WFP activated**
- **Set up temporary learning spaces**
- **Recruitment / training of teachers**
- **Advocacy/community messaging on value of education**
- **Establish viable partners across sectors**
- **In consultation with protection and shelter, encourage relocation of families sheltered in schools if possible**

- **Are there many children visibly not in school during school hours (e.g. in the streets, in the markets, at home, working, etc.)? If yes, what are they doing and what are the general characteristics of the children (e.g. girls, boys, minorities)?**
- **Do school facilities appear safe? If no, why not?**
- **Does the school show signs of being open / operational?**
- **Are there many children visibly not in school during school hours (e.g. in the streets, in the markets, at home, working, etc.)? If yes, what are they doing and what are the general characteristics of the children (e.g. girls, boys, minorities)?**

- **Are all of your children enrolled in school? If not, why not?**
### NARE Cross-Cutting Needs Assessment Issues

| Emergency Population Profile / Registration | • Population figures  
• Average family size  
• Vulnerability identification (for case management)  
• Demographic breakdown of populations (sex and age)  
• Population profiling (statistical data for programme planning, including livelihood, religion, etc.)  
• Population density in areas of origin and asylum  
• Numbers / breakdown (by sex and age) if any at this stage / predominant family composition  
• Metadata for population figures should include:  
  • Other information collected, such as ethnicities, key risks faced (specific needs, etc.)  
  • Source of the information (Government, UNHCR, other agencies, NGOs, etc.)  
  • Methods of data collection  
• What form of documentation (e.g. ID cards) do refugees carry, if any? |
| Population Movement Patterns | • Ongoing population movements and trends in movements, if any  
• Rates of arrival  
• Numbers / breakdown (by sex and age) if any at this stage / predominant family composition  
• Other information collected, such as ethnicities, key risks faced (vulnerabilities, etc.)  
• Places of origin  
• Any return (or back and forth) movement to (and from) country of origin? (Why and where are they returning? Family composition of refugees returning? Are they unaccompanied or separated?  
• Settlement distance from borders, major towns and conflict zones |
| Emergency Security | • Security risk assessment is a specialized skill. A security officer (e.g., UNHCR Field Safety Adviser, UNDSS Field Security Coordination Officer) should be included in the multifunctional assessment team. In all events, the following factors impacting safety of staff and persons of concern should always be considered.  
• Threats: Such as, extremist violence, armed conflict, civil unrest and crime that may be indirect or directly targeting both UNHCR and/or people of concern  
• Capabilities: Those of local authorities to address any unrest, hospitals and other emergency responders, accessibility for emergency transport (including evacuation) and to communications. Also consider community perceptions towards UNHCR, its activities, staff and people of concern. |
| Emergency Logistics and Supply | The key stages in the process of sourcing and supplying goods and assets for an emergency is as follows:  
• Assessing emergency needs against UNHCR emergency criteria  
• Assessing and evaluating the scale and scope of needs for relief items and asset use for both the short and longer term  
• Identifying available and most appropriate sources for emergency relief items  
• Evaluating most efficient and cost effective source or sources for initial and ongoing supplies  
• Obtaining necessary approvals and authorisations to deploy or purchase items  
• Purchasing, arranging transportation and delivery of goods and assets to the emergency area  
Moreover, the following sourcing options should be evaluated in terms of the most effective and efficient approach toward meeting the immediate needs:  
• Local warehouse stocks.  
• Goods from the Central Emergency Stockpiles (CES) or any available regional stockpiles.  
• Borrowed stocks from government or other aid organisations (which should subsequently be replaced).  
• Local in kind donations or donations resulting from a DER special appeal and (if possible) airlifted as close as possible to the emergency site.  
• Rerouting less urgent international shipments being delivered to other projects or destinations.  
• Local purchases.  
• International purchases shipped by air. |
